"*This timely book nicely summarizes the few, currently known, mechanisms underlying photobiomodulation (PBM) in the context of their most promising applications within a wide variety of halth care disciplines. Its perspectives range from enthusiastic acceptance and promotion of PBM applications to the more healthy encouragement of still much needed clinical research.*"

Dr. Donald Pathoff
Foundation for Photobiomodulation Research, USA

"*Laser therapy is today a reality for professionals in health care. At the same time, it is still a hot topic for research with many challenges to be overcome. This book puts together fundamental concepts and applications in a single resource, creates opportunities to multiply the potential users, and provides a summary of the state of the art in the field. The authors are prominent in their fields, for which the book will certainly prove to be an important reference.*"

Prof. Vanderlei S. Bagnato
University of São Paulo, Brazil

Low-level laser (light) therapy (LLLT) and photobiomodulation (PBM) are almost 50 years old and recently have been getting increasing acceptance from the scientific, medical, and veterinary communities. Discoveries are constantly being made about the cellular and molecular mechanisms of action, the range of diseases that can be treated is rising, and home-use LED devices are becoming common.

This book compiles cutting-edge contributions from the world's leading experts in LLLT and PBM. The chapters cover general concepts, mechanisms of action, in vitro studies, pre-clinical animal studies, veterinary applications, and a wide range of clinical topics. The book appeals to anyone involved in the basic science, translational aspects, and clinical applications of LLLT and PBM.

Michael R. Hamblin is a principal investigator at the Wellman Center for Photomedicine at Massachusetts General Hospital, Boston, USA, and an associate professor of dermatology at Harvard Medical School and the Harvard-MIT Division of Health Science and Technology, Massachusetts, USA. His research interests lie in the areas of photodynamic therapy and LLLT.

Marcelo Victor Pires de Sousa is founder and chief scientist at Bright Photomedicine, São Paulo, Brazil. He received his PhD on the topic "Physics Applied to Neuroscience" from the Institute of Physics, University of São Paulo, Brazil, and is involved in the development of new products and dissemination of photomedicine.

Tanupriya Agrawal obtained her MD from Netaji Subhash Chandra Bose Government Medical College, Jabalpur, India, and a PhD in biomedical sciences from Creighton University, Omaha, Nebraska. She is a visiting postdoctoral fellow at Dr. Hamblin's lab at the Wellman Center for Photomedicine. She is also a trainee pathology resident at Tufts Medical Center, Boston, USA.
