"There is no way to study thermal imaging and not learn from the writings of Francis Ring and Kurt Ammer. Pioneers of the application of infrared thermography in medicine, the authors unveil the direction for a sensible use of the method. Luck for us—students, professionals and enthusiasts—because we can be grateful to receive a differentiated material that shortens the learning path. No doubt a remarkable book."

Prof. Danilo Gomes Moreira Federal Institute of Education, Science and Technology of Minas Gerais, Brazil

"This book is set to become essential reading for anyone who wants to perform reliable thermal imaging of the human body, whether it be in medicine, clinical practice, sports science or research."

Prof. Graham MachinNational Physical Laboratory, UK

"This book is a wonderful practical guide that takes the reader through all the main stages required and will be of special interest for those interested in entering the fascinating field of clinical thermal imaging."

Professor Emeritus James B. Mercer UiT—The Arctic University of Norway, Norway

This book describes where and how an infrared equipment can be used in a strictly standardized way and how one can comprehensively report the findings. Due to their insight into the complex mechanisms behind the distribution of surface temperature, future users of medical thermal imaging should be able to provide careful, and cautious, interpretations of infrared thermograms, thus avoiding the pitfalls of the past.

Kurt Ammer was trained as a medical doctor in Vienna and was certified in general medicine and in physical medicine and rehabilitation (rheumatology). He was a senior researcher at the Ludwig Boltzmann Research Unit for Physical Diagnostics, Austria, between 1988 and 2004. He became involved in medical thermography in 1988 and was appointed as secretary and treasurer of the European Association of Thermology (EAT)

in 1990 and currently serves as the EAT treasurer. Dr. Ammer received his PhD from the University of South Wales, Pontypridd, UK, where he has been external professor since 2002. His research interests focus on rehabilitation medicine and the application and standardization of thermal imaging in medicine.

Francis Ring gained an MSc in pharmacology and later in 1994 was awarded a DSc at Bath University, UK. He joined the Arthritis Research Unit at the Royal National Hospital for Rheumatic Diseases, Bath, UK, in 1958 and retired as director of Clinical Measurement and Imaging in 2001. Then he became director of Medical Imaging Research at the University of South Wales and retired as emeritus professor in 2017. Prof. Ring is a member of the

Science Council and the Imaging Science Group of the Royal Photographic Society (RPS) of Great Britain, RPS medallist, RPS fellow and accredited senior imaging scientist.
