<b>1. A Lesson Learned from UHPLC</b>	<b>1</b>
<i>Gregory K. Webster and Laila Kott</i>	
1.1 Introduction	1
1.2 Technology and Chromatography	2
1.2.1 New Goal of Method Development: Speed	3
1.3 The Chromatography Market	4
1.4 Chromatographic Method Development	4
1.4.1 Software for Chromatographic Method Development	5
1.4.2 Flash Chromatography Method Development	5
1.4.3 Orthogonality in Column Chromatography	5
1.4.4 Unified Approach to Reversed-Phase and Normal-Phase Chromatography	6
1.4.5 Polysaccharide-Derived Chiral Stationary Phases for the Separation of Enantiomers	6
1.4.6 Chiral Chromatography: Method Development	6
1.4.7 Aqueous Normal-Phase Chromatography Using Type-C Silica Columns	7
1.4.8 Ion Chromatography Columns	7
1.4.9 Ion Chromatography: Method Development	7
1.4.10 Fundamentals, Properties, and Applications of Stationary Phases of Gas Chromatography Method Development	8
1.4.11 Gas Chromatography Method Development	8

1.4.12	Method Transfer from HPLC to UHPLC	8
1.4.13	Chromatographic Method Validation	9
1.4.14	Method Development Strategies for Ion Exchange Chromatography Using pH Gradient Separation for mAbs, Antibody Drug Conjugates, and Other Complex Bio-Pharmaceuticals	9
1.4.15	Size Exclusion Chromatography Method Development for Therapeutic Proteins	9
1.4.16	Ionic Liquids and Counter-Current Chromatography: Is This the Future of Process Purifications?	10
<b>2.</b>	<b>Software for Chromatographic Methods Development</b>	<b>13</b>
	<i>Aoi Ariyasu and Eiki Maeda</i>	
2.1	Introduction	13
2.2	General Features of Software	15
2.2.1	Typical Procedure for the Systematic Development of Analytical Methods and the Effect of the Software Employed	15
2.2.2	General Software Features and Applicability to the Various Stages of Analytical Method Development	18
2.3	Application of Software to Analytical Method Development	20
2.3.1	Structure-Based Retention Prediction	21
2.3.2	Chromatogram Simulation	22
2.3.3	Method Scouting/Screening	26
2.3.3.1	Online method scouting	26
2.3.3.2	Offline method scouting	29
2.3.4	Method Optimization	30
2.3.4.1	Method optimization using chromatographic software	34
2.3.4.2	Method optimization using DOE software	36
2.3.5	Robustness Evaluation	42

2.4	Advantages and Disadvantages of Using Available Method Development Software Programs	44
2.5	Future Perspective	46
<b>3.</b>	<b>Flash Chromatography Method Development</b>	<b>53</b>
	<i>J. Robert Bickler</i>	
3.1	Introduction	53
3.2	Goal Setting	54
3.3	Starting Out	54
3.3.1	Thin-Layer Chromatography	55
3.3.2	Using TLC to Scout Suitable Elution Solvents	56
3.4	Determining Cartridge Load Capacity	58
3.5	Determining Elution Style	60
3.5.1	Isocratic Elution	60
3.5.2	Linear Gradient Elution	60
3.5.2.1	Linear gradients from 0% to 100%	62
3.5.3	Step Gradient Elution	62
3.6	Choosing between Normal- and Reversed Phase	63
3.7	Conclusion	64
<b>4.</b>	<b>Orthogonality in Chromatographic Methods</b>	<b>65</b>
	<i>Zachary S. Breitbach and Gregory K. Webster</i>	
4.1	Introduction	65
4.2	Traditional View of Orthogonal LC Methods	66
4.3	Column Orthogonality in Reversed-Phase Chromatography	66
4.3.1	Introduction	66
4.3.2	Hydrophobic Subtraction Theory	68
4.3.2.1	HST for column comparison	69
4.3.2.2	HST values for commercial reversed-phase columns	69
4.3.2.3	HST for orthogonal reversed-phase separations	70

4.4	Orthogonality in Traditional Normal-Phase LC	72
4.5	Orthogonality in Supercritical Fluid Chromatography	74
4.6	Orthogonality in HILIC	77
4.7	Orthogonality in Chiral Chromatography	79
4.8	Orthogonality in Multi-Dimensional Chromatography	79
4.9	Conclusion	82
<b>5.</b>	<b>Unified Approach to Reversed-Phase and Normal-Phase Chromatographic Method Development</b>	<b>85</b>
	<i>Gregory K. Webster</i>	
5.1	Introduction	85
5.2	Unified Approach to Method Development	86
5.2.1	“Like Dissolves Like”	86
5.2.2	Information and Samples Required	87
5.3	Reversed-Phase Chromatography	89
5.3.1	Control of Analyte Retention	89
5.3.2	Hydrophobic Subtraction Theory/Columns	90
5.3.3	Solvent Strength	90
5.3.4	Screening	91
5.3.4.1	System considerations: UHPLC vs. Traditional	91
5.3.4.2	Traditional approach	93
5.3.4.3	Automated approach	95
5.3.5	Ion Pair Reagents	100
5.3.6	Reversed-Phase Screen Conditions	101
5.4	Normal-Phase Chromatography	101
5.4.1	Control of Analyte Retention	102
5.4.2	Hydrophobic Subtraction Theory	102
5.4.3	Solvent Strength	103
5.4.4	Ionic Samples	103
5.4.5	Screening	104
5.4.5.1	Mobile phases	104
5.4.5.2	Columns	104

5.4.5.3	Automated Normal-Phase Screening Systems	106
5.5	Hydrophilic Interaction Liquid Chromatography	107
5.5.1	Control of Analyte Retention	108
5.5.2	Hydrophobic Subtraction Theory	108
5.5.3	Solvent Strength	108
5.5.4	Ionic Samples	109
5.5.5	Screening	109
5.5.1.1	Mobile phases	109
5.5.1.2	Columns	110
5.5.1.3	Automated HILIC phase screening systems	110
5.5.1.4	HILIC screen conditions	110
5.6	Conclusion	111
<b>6.</b>	<b>Polysaccharide-Derived Chiral Stationary Phases for the Separation of Enantiomers</b>	<b>115</b>
	<i>Tong Zhang and Pilar Franco</i>	
6.1	Introduction	115
6.2	Column and Mobile Phase Selection	118
6.2.1	Method Screening with Organic Mobile Phases in HPLC	119
6.2.1.1	Immobilized CSPs under organic mobile phase conditions	120
6.2.1.2	Coated CSPs under organic mobile phase conditions	124
6.2.2	Method Screening with Aqueous or Water Compatible Mobile Phases in HPLC	125
6.2.2.1	Immobilized CSPs in aqueous or water compatible solvent mixtures	125
6.2.2.2	Coated CSPs in aqueous or water compatible solvent mixtures	128
6.2.3	Mobile Phases in SFC	128
6.2.3.1	Immobilized CSPs in SFC	128
6.2.3.2	Coated CSPs in SFC	130

6.3	The Role of Additives	131
6.4	Column Temperature	132
6.5	Effects of Flow Rate and Particle Size	136
6.6	Influence of Analyte Structure and the Substituent Effect	140
6.7	Column Maintenance, Cleaning, and Regeneration	144
6.8	Conclusions	148
<b>7.</b>	<b>Chiral Chromatography: Method Development</b>	<b>157</b>

# Preface

*From Greg Webster*

Years ago, when starting my industrial analytical chemist career, the company I started working for directly out of graduate school sent me to the HPLC Methods Development course by Lloyd Snyder and Joseph Kirkland. Having spent most of my graduate years on spectroscopy-related research, I was excited to “fill in the gaps” from the several chromatography courses I had taken. I knew my practical experience was lacking.

Snyder and Kirkland’s love of chromatography was evident in their teaching. It was contagious and set the foundation for an analytical career that has spanned several decades and many chromatography applications. After moving back to Chicago, I was asked to teach a graduate chromatographic methods development class at Governors State University. The previous instructors focused the class on regulatory applications and requirements of chromatography. My view was that students need more method development theory to be successful in industry—regulations are not much help without suitable selectivity for the analytical method. The standard text for liquid chromatographic development is and remains Snyder and Kirkland’s *Practical HPLC Method Development* and I used it for several classes.<sup>1</sup>

I joked after finishing my second book with Pan Stanford Publishing (now Jenny Stanford Publishing), *Poorly Soluble Drugs: Dissolution and Drug Release*, that never again would I take on such an undertaking.<sup>2</sup> I also realized an update in text was needed after driving home from a lecture at Governors State in which I was getting tired of telling students that they needed to focus on the principles of Snyder and Kirkland’s text, mostly because the specific columns and instruments used in 1997 were no longer

---

<sup>1</sup>*Practical HPLC Method Development*, 2nd edition, L. R. Snyder, J. L. Kirkland, J. L. Glajch, ©1997, Wiley-Interscience, Print ISBN 978-0471007036.

<sup>2</sup>*Poorly Soluble Drugs: Dissolution and Drug Release*, G. K. Webster, J. D. Jackson, R. G. Bell (editors). ©2017, Pan Stanford Publishing, Print ISBN 978-981-4745-45-1.

in use in current industrial laboratories. For example, few of us will ever use a  $250 \times 4.6$  mm column packed with  $10\ \mu\text{m}$  particles again. I told them my true life experiences of the battles I personally had with sister laboratories trying to get them to move from  $5$  to  $3\ \mu\text{m}$  particles and then ultimately having to do it all over again with UHPLC packings. After further reflection, I called my dear, very energetic and motivated friend and former co-worker Laila to see if she was interested in undertaking what at this time is truly to be my last chemistry book venture. I told Laila that no one rewrites a “bible.” If we were going to do something, we had to be different. We decided on a text that covers not just liquid chromatographic methods development but all the methods that an industrial chromatographer may see. Our idea was born. Laila and I approached Jenny Stanford Publishing with our idea and outline of the proposed chapters. With their interest assured, we then contacted those we knew who were subject matter experts in their assigned chapter.

Of course, life and work get in the way. A text we hoped to complete in 2017 was finished in 2019. I thank Laila for the periods where she drove the bus. We both thank our authors for their expertise, patience, and efforts. My hope is that this text may help an aspiring chromatographer, as Snyder and Kirkland’s text has helped me.

#### *From Laila Kott*

My path to this point has some similarities to Greg’s and some differences. As an undergrad at the University of Toronto, I took my time to declare my major and after almost two years at the university, chemistry it was and still is. The difference is that there were always core functions of chemistry that I considered just part of the chemists’ toolbox as I followed one research project after another. I made the materials I needed to study; I analyzed the materials I needed to study. I never considered myself a certain type of chemist, just a chemist.

Several degrees later and having taken a sabbatical from the scholarly life between my master’s and doctoral degree to do chemistry in the former Soviet Union, I ended up in the pharmaceutical industry, where I found my journey through many different projects had afforded me a very strong background in a variety of analysis techniques. Since, as Greg mentioned above,

people often focus in one area or one technique, I found that looking at a problem using several different techniques often gave one a more complete picture of what you were looking at.

This was the exact time when Greg and I started collaborating and we have been tackling interesting problems as well as pharmaceutical industry standard problems ever since. We have always pushed the newest columns, the newest technology. This has its drawbacks as not all things new are readily accepted by the regulatory bodies during new drug filings. Nevertheless, we noted that there was a decided lack of method development information for the modern chromatographer out there, and this is our attempt to rectify the situation. We have had many challenges during the compilation of this book, but our drive never wavered as the need is out there. Happy separations!
