

Index

- A. tumefaciens* 61–62
AAV-CRISPR genome editing 325
AAV serotypes 298–299
ABTS, *see* 2,2'-azino-bis(3-ethylbenzothiazoline-6-sulfonic acid) diammonium salt
Acetobacter rancens 10
acetyl-CoA synthetase (ACSS1/2) 382
10- β -acetyltransferase 50
engineering 50
saturation mutagenesis 51
acetyltransferase 49–50, 265, 292, 316
Achromobacter 10, 12
Acidaminococcus spp. 295
ACL, *see* ATP citrate lyase
acrylamide 106, 123–124, 225
ACSS1/2, *see* acetyl-CoA synthetase
acute myelocytic leukemia 106
acute myeloid leukemia (AML) 285, 377, 385, 391
acute myelomonocytic leukemia 106
acyclovir 241
acylpepsipeptide ADEP4 272
ADA, *see* adenosine deaminase
ADA-SCID 285, 337
adaptive laboratory evolution (ALE) 19
ADE, *see* antibody-dependent enhancement of infection
adenosine deaminase (ADA) 285, 294, 337
adenosyl-homocysteine 383
adriamycin 146, 148
advanced therapy medicinal products (ATMPs) 296
Agrobacterium 18, 59, 61
Agrobacterium rhizogenes 61
Agrobacterium vitis 18
albendazole 140
alcohol dehydrogenases 140
alcohol oxidase I (AOX1) 38
aldehyde dehydrogenases 133
ALE, *see* adaptive laboratory evolution
alemtuzumab 335
alfalfa mosaic virus 64
ALL, *see* pediatric acute lymphoblastic leukemia
alloCAR 334
alpha-hemolysin 272
Alzheimer's disease 326, 330–331, 333
amyloid hypothesis 330
familiar 330–331
sporadic 330–331
tau hypothesis 330
ametryn 176, 183, 185
amidases 132, 143–144
amikacin 270
amino acid biosynthesis 2, 7–8
amino acid transporters 16, 383
aminoglycosides 263–264
amisulpride 241

- amitriptyline 176, 183, 185
AML, *see* acute myeloid leukemia
 amoxicillin 241
 AMP-activated protein kinase (AMPK) 380
 amphetamine 136
AMPK, *see* AMP-activated protein kinase
 animal models 64, 304–306, 329, 339, 388
Anopheles gambiae 317
 anti-asparaginase antibodies 108
 antibiotic resistance 260
 antibiotics 60, 63, 67, 84–85, 87, 97, 99, 139, 141, 156, 168, 188, 234, 260–262, 264, 266–272
 antibody-dependent enhancement of infection (ADE) 70
 anthelmintics 140
 antimycobacterial agents 269
 anti-PEG antibodies 109
 antisense RNA 272
AOX1, *see* alcohol oxidase I
 apolipoprotein E 332
Arabidopsis 6, 67, 72–73, 117, 119
Arabidopsis thaliana 73, 119
 ASNase 105
 asparaginase producing organism in silico approach 110
Aspergillus oryzae 192, 199, 235
 ATMPs, *see* advanced therapy medicinal products
 atorvastatin 81–82, 96–97
 ATP citrate lyase (ACL) 382
 atrazine 176, 183, 185–186, 192, 199
 autoimmune disorders 106
 5-aza-2'-deoxycytidine 392–393
 azacitidine 377
 5-azacytidine 391–394
 azathioprine 149
 2,2'-azino-bis(3-ethylbenzothiazoline-6-sulfonic acid) diammonium salt (ABTS) 193–194, 198
 azo-drugs 156
 7- β -xylosyl-10-deacetyltaxol 35
 7- β -xylosyl-10-deacetyltaxol (XDT) 35
 B6 vitamers 2–3, 5–11, 16, 24
 5'-phosphate (PLP) 2, 4–10, 15, 24–25
 pyridoxal (PL) 5–6, 9, 15–16, 24
 pyridoxamine (PM) 5–6, 9, 15
 pyridoxamine 5'-phosphate (PMP) 2, 5, 7, 15
 pyridoxine (PN) 3, 5–6, 9–11, 15–16, 24
 pyridoxine 5'-phosphate (PNP) 4–5, 8–9, 11, 15, 24–25
 BACE1 inhibitor 331
Bacillus 6, 8, 10, 12–13, 15, 60, 67, 85–87, 98, 118, 124
Bacillus anthracis 60, 67
Bacillus clausii 8
Bacillus CS93 86–87
Bacillus subtilis 6, 13, 15, 118, 124
 base editing 293–294, 346
 base editor (BE) 293–294, 348
 BBB, *see* blood–brain barrier
BCL11A protein 353
 BE, *see* base editor
 benzimidazole drugs 140
 benzophenone 177, 184, 186
 beta-amyloid plaques 330
 BF 234, 237, 241
 bilirubin 147
 bio-factories 58–59

- biofilm 60, 95, 272
 bioinformatics 270
 biosensor 106, 124
 biosurfactant 86
 biosynthetic gene clusters 270, 351
 biosynthetic pathways 2, 4, 19
 biotin protein ligase 9
 bisphenol A 180, 190, 197–198,
 225
Bjerkandera adusta 171
Bjerkandera sp. 173
 BLAST 110
 blaZ gene 261, 264
 β-blockers 168
 blood–brain barrier (BBB) 147,
 303, 319, 338
Bombyx mori 305
Bordetella petri 18
 bromezepam 156
 bupivacaine 144
 busulfan 146, 148, 318–319, 340
 butorphanol 152
- C. botulinum* 123
C. elegans 92–95, 98, 272
 metabolism-resistant fluorinated
 drug 93
Caenorhabditis elegans 329
 caffeine 137–138
 calcitonin 153
 cancer 36, 64, 70–72, 95, 106–107,
 109–110, 123, 155, 282–283,
 302, 304, 309, 311, 314–315,
 329, 334, 339–340, 342, 344,

“This book is a highly recommended treatise for students, teachers, and researchers working in the many facets of biocatalysis as utilized by the pharmaceutical industry. The book spans the production of fine chemicals and active pharmaceutical ingredients in bacteria and yeast through to plant biofactories. There are interesting chapters on using microbial systems for the synthesis and degradation of pharmaceuticals and on the enzymes driving drug metabolic clearance in the human liver. The treatment of waste water using laccases or ligninolytic enzymes is also featured. The potential for biocatalysis to influence future gene therapy applications, e.g., CRISPR-Cas9 and CAR-T, is discussed in great detail. Each topic is covered in genuine depth, well referenced, and written by the experts in their respective fields.”

Dr. Martin A. Hayes
Discovery Sciences, AstraZeneca, Gothenburg, Sweden

“The role of biocatalysis in the pharmaceutical industry has had an amazing evolution in the last forty years, moving from the pioneering enzymatic kinetic resolutions, up to in vivo cascade-reactions performed with metabolically engineered microorganisms. The selection of topics presented in this book clearly highlights the contribution of this last frontier of biocatalysis to the development of more efficient and sustainable pharmaceutical syntheses, as well as the key role of enzymes in the metabolic and environmental fate of pharmaceuticals.”

Prof. Pier Paolo Giovannini
University of Ferrara, Italy

This volume deals with several different aspects of pharmaceuticals, which include not only various applications of drugs and their metabolism but also natural resources for active pharmaceutical ingredients as well as the removal of pharmaceutical pollution. It describes in detail the novel approaches for developing microbial fermentation processes to produce vitamin B6 using microorganisms, together with novel routes for vitamin B6 biosynthesis. The other topics discussed are new approaches for producing the successful anticancer drug Taxol from naturally occurring precursors, molecular farming through plant engineering as a cost-effective means to produce therapeutic and prophylactic proteins, and successful screening of potent microorganisms producing L-asparaginase for various chemotherapeutic applications. Furthermore, microbial biotransformations in the production and degradation of fluorinated pharmaceuticals are described. The other chapters inform the reader about the biotransformation of xenobiotics/drugs in living systems, the degradation of pharmaceuticals by white-rot fungi and their ligninolytic enzymes, and the removal of pharmaceutical pollution from municipal sewage using laccase. The concluding chapters deal with the mechanism of drug resistance in *Staphylococcus aureus*, genome editing and gene therapies, and epigenetic and metabolic alterations in cancer cells, including therapeutic approaches.

Peter Grunwald studied chemistry at the Universities of Saarbrücken and Hamburg, Germany. He graduated in the field of high-frequency spectroscopy and then became a staff member of the Institute of Physical Chemistry. After receiving his PhD in physical chemistry, he founded a biotechnology research group. He was appointed professor in 2001. His research interests focus on immobilized biocatalysts, kinetics of enzymes in organic solvents, and interactions between biocatalysts and heavy metal ions. Prof. Grunwald is also interested in chemical education, including curriculum development. He has authored a textbook on biochemistry and is an editorial board member of *Catalysts*.
