Index

acceptor concentration dependence 104–5
acceptor emission 105–6
acceptor enhancement 106, 108
aerogels 74–76
AFM *see* atomic force microscopy
alkanethiols 39–40
alloying 45, 48–49
amino acids 220–21
amino groups 42, 44, 71, 182, 220
antibodies 176, 181–82, 185–86, 206, 210
aqueous CdTe nanocrystals 40–41, 50
aqueous synthesis 24–25, 27, 36, 46, 49, 53–54, 181, 206
atomic force microscopy (AFM) 195–96
azimuthal modes 134, 141
azimuthal quantum numbers 122–23

Bessel functions 123–24
bioconjugation 176, 181, 183–84, 186
bioimaging 25, 49, 53, 177, 191, 196
bioinspired systems 193, 196
biological buffers 180
biomolecules 44, 176–79, 181–85, 187, 189, 191, 193, 195–96, 205–6, 209, 212, 218
  conjugated 176, 178
biotechnology 175
bovine serum albumin (BSA) 182, 184–86, 190, 196
Brillouin zone 2–3
BSA *see* bovine serum albumin
bulk crystals 1, 3, 5

cadmium telluride 1, 173, 206
cancer 192, 216
carbodiimide chemistry 70
carbodiimide hydrochloride 182–83
cationic polymer 184, 188–89
cavity-enhanced Raman scattering (CERS) 142, 145
CdHgTe 6, 25, 45, 77
CdS 4, 6, 16–17, 21, 24, 38, 77, 175, 177
CdSe 6, 16–17, 21, 48–49, 77, 150, 169, 175, 180–81
CdTe 2–4, 7, 10, 16–17, 24–25, 27, 34–35, 38, 45–49, 67, 76, 181
CdTe-based alloyed nanocrystals 45, 47
CdTe donor–acceptor multilayer structures 109
CdTe dots 9, 17
CdTe nanocrystal growth mechanism 30–31, 33
CdTe nanocrystals 6, 10–13, 24, 28–31, 36–38, 40–41, 48–49, 65–73, 75–79, 127–28, 142–43, 145–46
  aqueous synthesis of 25, 27

colloidal 23–24, 26, 28, 30, 32, 36, 38, 40, 42, 44, 46, 48, 50
stabilized 67
thiol-capped 26, 63
CdTe nanoparticles 25
CdTe nanowires 73
CdTe particles, encapsulation of 42, 49
CdTe QD biocompatibility 216–17, 219
CdTe QD donor–acceptor systems 114
CdTe QD–gelatine nanocomposites 218
CdTe QDs 7–8, 16, 24–25, 41–42, 97–98, 176–78, 180–82, 184–91, 194, 196, 211, 213, 216, 218, 221–23
as-synthesized 180
stabilized 111, 113
cellular barriers 209, 211, 213, 215
cellular localisation 205–6, 208, 210, 212, 214, 216, 218, 220
CERS *see* cavity-enhanced Raman scattering
chemotherapy 192
chloroform 38–41, 63
chromacity 67
cinnabar 2
clathrin 211
colloidal chemistry techniques 6
colloidal nanoparticles 62
colloidal synthesis 61
core/shell structures 6, 25–26, 45
covalent bioconjugation 182, 186
cysteamine 35, 67, 104, 176, 218, 220
cysteine 42, 44, 54, 176, 181, 220–21
cytoplasm 212–14
cytosol 211–14, 221
cytotoxicity 180, 208, 217, 221

density functional theory (DFT) 2
DFT *see* density functional theory
DNA duplex 188–89
DNA hybridization assays 184, 187, 190
donor–acceptor bilayer structure 112
donor–acceptor cluster solutions 101
donor–acceptor monolayers, mixed 105, 112
donor–acceptor QD structures 101, 103, 105–7, 109, 111
donor–acceptor separations 89, 92–93, 106, 108
donor emission decay 104, 106
donor photoluminescence decays, time-resolved 104
drug delivery 209, 220–23, 225

effective mass approximation (EMA) 7–10
electroluminescence 66
electronic coupling 95
EMA *see* effective mass approximation
endocytic mechanisms 210, 212–13
endocytosis 211
endoplasmic reticulum 212, 214
epithelial cells 209, 211, 213–15, 221

FLIM *see* fluorescent lifetime imaging microscopy
fluorescent lifetime imaging microscopy (FLIM) 215
Fourier analysis 148
free spectral range (FSR) 148–49
FSR *see* free spectral range

gelatine 218–19, 223
generalized Lorentz–Mie theory (GLMT) 138
GLMT *see* generalized Lorentz–Mie theory
glutaraldehyde 182
glutathione 218, 220–21
gold nanoparticles 112

HCA *see* high content analysis
high content analysis (HCA) 207–8, 217
high-performance liquid chromatography (HPLC) 185, 197
histones 216
HPLC *see* high-performance liquid chromatography
hydrophobic ligands 176

immunoassays 177, 185–86
interaction, exciton–phonon 14, 16, 20
intracellular trafficking 208–9

kidneys 210–11

layer-by-layer assembly 64–65
LEDs *see* light-emitting diodes
light-emitting diodes (LEDs) 25, 63–65
light-harvesting antennas 189, 193
lymph nodes 193, 210
lysosomes 210–12, 217, 219

macrophage cells 213–14, 218, 222
macropinocytosis 211–12
Maxwell–Garnett approximation (MGA) 11
melamine formaldehyde 68–69, 126, 142
metastasis 192
methylene blue 188–89, 197
MGA *see* Maxwell–Garnett approximation
micelles 39, 221
microdroplets 142
microgels 71
microwave irradiation 24–26, 44–45
microwell 153–54, 158
monolayers 64, 67, 88, 98–100, 111, 132, 143, 145

nanocentipedes 73
nanochains 96–97
nanocrystals
  alloyed 47–48
  thiol-capped 63, 70, 74, 77
nanoparticles
  engineered 221, 223
  spherical 12
nanosheets 63, 72–74

nanowires 63, 84–85, 95–96, 98, 102
naproxen 222
non-covalent coupling 184
NPC *see* nuclear pore complex
nuclear envelope 213
nuclear pore complex (NPC) 213–14

ODP *see* optical deformation potential
optical deformation potential (ODP) 14
optical encoding 177, 190
optical phonons, confinement of 143–44
optoelectronics 63, 77, 114, 196
organelles 211, 213
organic dyes 174–75

peak emission wavelength 99
perturbation 7, 176, 178
phagocytosis 210–11
phenylalanine 220
photoluminescence lifetimes 4, 6, 16, 24, 27–28, 32, 36, 40, 46–48, 63, 89–90, 92, 95–97, 153–54, 215
photon lifetime 123, 159–60, 162
photonic atoms 121, 123, 150, 166
photonic dots 150
photonic molecules 77, 149–50, 160, 165
phototherapeutics 209
plasma membrane 211–12
polyelectrolytes 66–67, 69–70, 80, 190
polymerizable surfactants 42, 63
polymers 6, 42, 57, 61, 68, 74, 126, 153, 181, 191, 222
  amphiphilic 38, 40, 176
polystyrene 42–43, 68, 142, 152
polyurethane 42
proteins 167, 181–82, 185–86, 206, 218, 221
proteoliposomes 195
putative physical subcellular barriers 208

QD assemblies, nanocrystal CdTe 113
QD chains 97
QD fluorescence 174, 188, 195
QD molecules 87, 95
QD toxicity 216–17
QD uptake 211, 214, 216–17, 221
QDs *see* quantum dots
quantum dots (QDs) 6, 10–16, 39–40, 42–44, 87–91, 95–99, 101–2, 114–15, 117–19, 173–82, 184–202, 206–9, 211–23
  CdSe 97, 175–77, 184, 194, 215
  CdSe/ZnS 178–81, 184, 193, 195
  CdTe nanocrystal 6–7, 9, 11, 13, 15
  conjugated 222
  red-emitting 95
  transport of 212–13, 216

radioactivity 192–93
Raman scattering 83, 121, 142, 144, 168
resonant Raman scattering (RRS) 13

reticuloendothelial system 210
Rhodobacter sphaeroides 193–94
RRS *see* resonant Raman scattering

semiconductors 5, 13, 17–21, 61, 114
sentinel lymph node (SLN) 192–93, 197
silanization 176, 180
SILAR *see* successive ion-layer adsorption and reaction
silica 43–44, 70, 127
silica beads 43, 68, 70
silica shells 44, 180
single-color QDs 191
single-mode tight-binding (SMTB) 155–56
SLN *see* sentinel lymph node
SMTB *see* single-mode tight-binding
spherical microcavities 121–23, 125–26, 128, 130, 133, 135–37, 139, 143, 145–47, 162–63, 165
successive ion-layer adsorption and reaction (SILAR) 44
sulfur 34, 201

TEM *see* transmission electron microscopy
thin films 1, 17, 64, 67
thiols 24, 27, 31–32, 179, 182, 221
  short-chained 63–64
toluene 38–39, 41, 63, 96
toxicity 180, 217–19, 222–23
transmission electron microscopy (TEM) 9, 27–29, 50, 75
tumors 222–23

wet chemical processes 65
WGM degeneracy 134–35, 153
WGMs *see* whispering gallery modes
whispering gallery modes (WGMs) 68, 122–23, 125–29, 131–34, 139, 141–42, 145–46, 148–50, 152–54, 160, 162, 167–69

zero-phonon line (ZPL) 15
ZPL *see* zero-phonon line
