

# Index

- ACIS (autonomous catheter insertion system) 156, 237–39, 241–49
- acute stroke treatment 59, 69, 71
- anatomical model 88
- aneurismal clipping treatment 106, 110
- aneurysm 2–3, 26, 47–50, 52–55, 67–68, 75–76, 84, 86, 97, 100–6, 109–11, 118–21, 201–3, 216–18, 220
  - brain 193
  - inlet of 109–10
  - large-size 49, 52
  - outlet of 109–10
  - ruptured 48–50
  - unruptured 48, 201
- aneurysm initiation 200
- aneurysm models 103, 200
- aneurysm neck 50
- aneurysm treatment 47, 201
- angiography 63–64, 74, 83–84, 87, 202, 250, 261
- ARES (assembling reconfigurable endoluminal surgical system) 20, 21
- ARKANES (augmenting the kinematics of endoluminal surgery) 20–21
- arterial block model 240–41
- arterial model 89, 92, 96, 115, 142, 193, 233, 239, 243–44, 246
  - cerebral 75, 90–91, 99–100, 117, 123
- arterial structure 78, 90, 92–93
- arterial tissue 78, 86, 88
- arteries 41, 48, 56, 59, 64, 70, 85, 93, 120, 193, 203, 217, 240, 242, 265–66
  - basilar tip 85, 87
  - femoral 112–13, 115, 249
- artificial organs 23, 25, 27, 29, 31, 33, 35, 277
- assembled MSPs 286–87
- assembling reconfigurable endoluminal surgical system *see* ARES
- atherosclerosis 55, 59, 70, 200, 203
- augmented reality systems 9, 14
- augmenting the kinematics of endoluminal surgery *see* ARKANES
- autonomous catheter insertion 158, 223, 237, 260
- autonomous catheter insertion system *see* ACIS
- average stress 146
- BA (basilar artery) 62, 64, 76, 85–88, 99
- basic equations of flow analysis 160–61, 163, 165, 167, 169
- basilar artery *see* BA
- biodegradable polymers 22, 26, 28, 31, 34
- biodegradable scaffolds 30–31, 34, 42, 267, 276–77, 279, 281, 283, 285, 287, 289, 291, 293, 295, 297
- biodegradable vascular scaffolds 263–64, 266, 268, 270, 272, 274, 276, 278, 280, 282, 284, 286, 288, 290, 292
- blood flow
  - numerical simulation for 159–60, 162, 164, 166, 168, 170, 172, 174, 176, 178, 180, 182, 184, 186, 188
  - transient insufficiency of cerebral 55
- blood flow simulations for internal carotid artery 193, 195, 197, 199
- blood pressure 19, 193, 197, 210, 220–21
  - high 49, 56, 59

- blood pressure simulation in saccular aneurysm model 216–17, 219
- blood stream 3–5, 22, 27, 79, 81, 94, 99, 110, 227
- blood streaming 78, 88–89, 104, 109–11
- blood vessel area 81–83
- blood vessel model 128, 133, 137–38, 147–50, 216, 251, 258, 268
- blood vessel model wall 11, 144, 148
- blood vessel morphology 10–11, 155–56
- blood vessels 2–3, 5, 11–12, 19, 55–58, 62, 74, 79, 81–83, 85, 112–13, 141, 200, 250–51, 266–67
  - brain 79, 81–82
- bone tissue 81, 83
- brain attack 47–48, 50, 52, 54, 56, 58, 60, 62, 64, 66, 68, 70
- BT aneurysm 85, 87, 97–99, 118, 121
- BT artery 84
  
- carotid artery 47, 55, 57–58, 112–13, 115, 148, 207, 232, 242, 267–68, 276
  - membranous model of 243–44
- carotid artery endarterectomy 56–57
- carotid artery scaffold 266–67, 269
  - fabrication of 266, 267, 269
- carotid artery stenosis 47, 55–57
- carotid artery stenting *see* CAS
- carotid artery stents 58
- CAS (carotid artery stenting) 56–57
- catheter
  - guide 3, 156–57
  - remote control device of 41, 260
  - specialized 11, 62–63
- catheter driving method 41, 260
- catheter insertion 226, 234, 239, 241, 246
- catheter insertion path reconstruction 20, 237
- catheter insertion paths 225, 239, 248–49
- catheter insertion ports 114, 157, 221
- catheter insertion robot 155, 226, 237
- catheter insertion systems, autonomous 156, 237
- catheter insertion trajectory 247–48
- catheter motion 154, 226, 234, 237, 242, 244
- catheter prototypes 40, 222
- catheter tip detection 153
- catheter tip locations 151–53
- catheter tip position 154, 237, 251
- catheter tip tracking 155–56
- catheter trajectory 148, 156, 241, 244
- CBF (cerebral blood flow) 55, 62–63, 202
- CBV (cerebral blood volume) 62–63
- cell culture 274–75, 289–90
- cell growth factor *see* CGF
- cell implantation 23–24
- cell sheets 35–36, 45
- cells
  - confluent 35–36, 274
  - marrow-derived 29
- cerebral aneurysms 3–4, 37, 47–49, 51, 53, 55, 67–68, 76, 203, 217, 223
- cerebral artery 6, 37, 47, 49–50, 73, 75–76, 85, 87–88, 106, 112–13, 118, 121, 216–17, 222
- cerebral blood flow 55, 62–63
- cerebral blood flow *see* CBF
- cerebral blood volume *see* CBV
- cerebral infarction 59, 61, 63, 69
- cerebrovascular diseases 47, 70, 73, 75, 77, 84, 90, 107, 110
- CFD (computer fluid dynamics) 201, 218
- CGF (cell growth factor) 30–31
- coil embolism 95, 103–4, 119
- coil embolization 101–2, 202
- coils
  - deployable 51
  - installed 104
- common carotid artery 56–57, 232
- comprehensive surgical simulator 112–13, 115–17, 119, 121, 123
- computed tomography *see* CT
- computer fluid dynamics *see* CFD
- computer tomography angiography *see* CTA
- CT (computed tomography) 6, 40, 61, 73–74, 76, 79–81, 83–84, 87, 193, 201

- CTA (computer tomography angiography) 48, 63
- deformation 40, 78, 90, 93, 95, 148, 150, 154, 167, 216, 219, 237, 279  
     plastic 128, 205–6, 208, 220  
     vascular 88, 99–100, 105, 111
- descending aorta 250–51, 253
- descending aorta silicone model 253
- development of biodegradable scaffolds 277, 279, 281, 283, 285, 287, 289, 291, 293, 295, 297, 299, 301
- digestive organs 6–7
- digital subtraction angiography *see* DSA
- digital subtraction angiography simulation 227, 229
- DSA (digital subtraction angiography) 2, 47, 50–51, 53–54, 64, 77, 82, 201, 227, 250
- electrospinning 31–32, 265, 278, 289
- embolism 3–4
- embolization 47–48, 52–53, 55, 103–4
- embolization simulation 104–5
- endoscopic surgery 65–66
- endoscopic systems 65
- endovascular intervention 1, 6, 10–11, 19, 73–75, 88, 106–7, 110, 112, 114–15, 117, 123–24, 157, 227, 236
- endovascular intervention treatments 110, 112
- endovascular surgery 2, 11, 17, 120, 156, 158, 236–37, 249
- endovascular surgery simulation 10–11, 125, 143, 148, 306
- FDM (finite-difference method) 160, 170–72, 182–83
- FEM (finite-element method) 160, 170, 172, 295
- ferrite particles 279–80, 290
- finite-difference method *see* FDM
- finite-element method *see* FEM
- finite-volume method *see* FVM

*"This book presents an important and timely subject and contains a wide range of knowledge derived from the contributors' long-time experience. It is the first work to integrate medicine and engineering exceptionally well and a great reference for graduate students, researchers, and doctors specializing in microsurgery."*

**Prof. Tzyh Jong Tarn**

Washington University in St. Louis, USA

This book presents the development of the endovascular evaluator (EVE), which was motivated by the lack of *in vitro* simulation tools to reproduce patient-specific vasculature morphology. The development of patient-specific silicone vasculature models and the EVE is a breakthrough that is improving medical training and facilitating research and development in industry and academia. This book explains the development of *in vitro* simulators for biomedical applications based on the scientific context in robotics and on the explanation of the medical procedure to be simulated. It presents modeling methods for *in vitro* representation of human tissue and of tissue integrity during endovascular surgery simulation. Additionally, it presents the applications of this *in vitro* vasculature modeling technology.

**Toshio Fukuda** received his bachelor's degree from Waseda University, Tokyo, Japan, in 1971, and master's and Dr.Eng. degrees from the University of Tokyo, Japan, in 1973 and 1977, respectively. In 1977, he joined the National Mechanical Engineering Laboratory, Japan. He joined the Science University of Tokyo, Japan, in 1982 and Nagoya University, Nagoya, Japan, in 1989. Currently, he is director of the Center for Micro-Nano Mechatronics and professor at the Department of Micro-Nano Systems Engineering at Nagoya University, where he is mainly involved in the research of the intelligent robotic and mechatronic system, cellular robotic system, and micro- and nano-robotic system. He is Distinguished Professor at Seoul National University since 2009.

**Carlos Tercero** received his bachelor's and licenciature degrees from the Department of Electronics Engineering at Del Valle de Guatemala University, Guatemala, in 2002 and 2003, respectively. He received his MS from the Complex System Science Department of Nagoya University, Japan, in 2007, and Dr.Eng. degree from the Department of Micro-Nano Systems Engineering, Nagoya University, in 2008. In 2008, he was director of the Departments of Electronics Engineering and Mechatronics Engineering at Del Valle de Guatemala University. From 2009 to March 2012, he was with the Global Center of Excellence for Education and Research of Micro-Nano Mechatronics of Nagoya University, where he was mainly involved in the research of *in vitro* simulation for endovascular intervention. He joined Denso Corporation in April 2012.
