Contents

<i>Preface</i>	xi
1 Introduction	1
<i>Rosa Alejandra Lukaszew</i>	
1.1 Overview	1
1.2 Magnetic Order	2
1.3 Nanomaterials and Magnetism	5
2 Spintronics and Spintronic Applications	13
<i>Jiwei Lu and Stuart A. Wolf</i>	
2.1 Introduction to Spintronics	13
2.2 Spin Polarization in Ferromagnets	15
2.3 Giant and Tunneling Magnetoresistance	18
2.3.1 Giant Magnetoresistance	18
2.3.2 Tunneling Magnetoresistance	20
2.4 Magnetic Tunnel Junction and MRAM	22
2.5 Spin Torque Transfer	26
2.6 Spin Torque Transfer Applications	28
2.6.1 STT-RAM	28
2.6.2 Current-Induced Domain Wall Motion Memory	32
2.6.3 Spin Torque Oscillator	34
3 L1₀ Alloy Thin Films and Nanostructures	41
<i>Jonathan R. Skuza</i>	
3.1 Introduction	42
3.1.1 Data Storage	42
3.2 Crystal Structure	44
3.3 Long-Range Chemical Order	47

3.3.1	Long-Range Chemical Ordering Parameter	47
3.3.2	Direct Measurement of S	49
3.3.2.1	Case 1: No chemical order ($S = 0$)	50
3.3.2.2	Case 2: Chemical order ($S > 0$)	50
3.3.3	Experimental Quantification of S	52
3.4	Magnetic Anisotropy and Other Properties	54
3.5	Material Synthesis	57
3.5.1	Codeposition Techniques for Thin Films	58
3.5.2	Incorporation of Additional Elements	60
3.5.3	Nanostructures	61
3.6	Conclusion	62
4	Relaxation in Magnetic Materials for Spintronics	71
	<i>Claudia K. A. Mewes and Tim Mewes</i>	
4.1	Damping Mechanisms	74
4.2	Magnon–Phonon Interaction	75
4.3	Eddy Current Damping	75
4.4	Spin–Orbit Relaxation	76
4.5	Spin Pumping	79
4.6	Two-Magnon Scattering	80
4.7	Slow-Relaxing Impurities	84
4.8	Conclusions and Outlook	86
5	Nonlinear Dynamic Properties of Two-Dimensional Arrays of Magnetic Nanodots	97
	<i>Yuri Kobljanskyj, Denys Slobodianiuk, Gennady Melkov, Konstantin Guslienکو, Valentyn Novosad, Samuel Bader, Michael Kostylev, and Andrei Slavin</i>	
5.1	Introduction	98
5.2	Parametric Excitation of Spin-Wave Modes in a Magnetic Dot	101
5.3	Multimode Magnetization Dynamics above the Parametric Threshold	103
5.4	Results and Discussion	107
5.5	Heating of Nanodots under the Action of Parametric Pumping	111
5.6	Summary	113

6	Dynamics of Magnetic Nanoparticles and Nanodevices	117
	<i>Stephen E. Russek, Robert J. Usselman, and Eric R. Evarts</i>	
6.1	Introduction	118
6.2	Stochastic Equations of Motion	119
6.3	Dynamics of Superparamagnetic Particles	127
6.3.1	Superparamagnetism	127
6.3.2	Fluctuation Broadening	128
6.3.3	Ensemble Effects	132
6.4	Dynamics of Nanoscale Magneto-electronic Devices	135
6.4.1	Dynamics in Magnetoresistive Sensors	136
6.4.2	Magnetic Switching/Memory	137
6.4.3	Spin Transfer Devices	139
6.5	Quantum Effects	142
6.6	Summary and Outlook	143
7	Nonlinear Optics in Magnetic Nanostructures	149
	<i>Tatiana Murzina and Oleg Aktsipetrov</i>	
7.1	Introduction	149
7.2	Historical Aspects of Nonlinear Magneto-Optics	150
7.3	Phenomenological Description of Nonlinear Magneto-Optical Effects	153
7.4	Magnetization-Induced Anisotropy of the Nonlinear Optical Response	158
7.5	NOMOKE in Magnetoresistive Granular Films	160
7.6	MSHG in a Disordered Array of Magnetic Nanoparticles	166
7.7	Conclusions	170
8	Magnetoplasmonic Nanostructures	175
	<i>César Clavero and Rosa Alejandra Lukaszew</i>	
8.1	Introduction	176
8.2	Thin Films and Multilayers	182
8.2.1	Multilayers	182
8.2.2	Nanocomposite Thin Films and Multilayers	187
8.2.3	Multilayers on Gratings	189
8.3	Core-Shell Nanoparticles	191
8.4	Conclusions	194

9	Understanding Magnetic Exchange in Molecule-Based Magnets from an Electronic Structure Point of View	203
	<i>Andrew P. Weber, Paul M. Rulis, Michelle M. Paquette, Konstantin I. Pohkhodyna, Saad Z. Janjua, and Anthony N. Caruso</i>	
9.1	Introduction	203
9.2	Basic Views of Electronic Structure and Electron Interactions	210
9.2.1	Competing Energies and Particle-Wave Structure	210
9.2.2	Ligand Fields and Magnetic Exchange in Organometallic MBMs	213
9.3	Formal Theories of Exchange–Correlation	216
9.3.1	The Independent-Electron Approximation as a Starting Point	216
9.3.2	Theories for Evaluating Exchange and Correlation	220
9.3.2.1	Extensions of the Hartree–Fock method	220
9.3.2.2	Density functionals	221
9.3.2.3	Hybrid functionals	224
9.3.2.4	DFT+ <i>U</i>	225
9.4	Spectroscopic Probes of Electronic Structure: Application to Metal Tetracyanoethylenes	225
9.4.1	Photoemission Spectroscopy	226
9.4.1.1	Resonant photoemission	228
9.4.1.2	Spin-resolved photoemission	229
9.4.1.3	Other photoemission studies	230
9.4.2	X-Ray Absorption Spectroscopy	232
9.4.2.1	X-ray magnetic circular dichroism	232
9.4.2.2	UV-visible magnetic circular dichroism	233
9.4.3	Raman and Infrared Absorption Spectroscopies	235
9.5	Toward Predictive Understanding of Magnetic Exchange	235
10	Spin-Polarized Scanning Tunneling Microscopy	247
	<i>Kangkang Wang and Saw-Wai Hla</i>	
10.1	Introduction	248

10.2	Preparation of the SP-STM Tip	251
10.3	SP Scanning Tunneling Microscopy Applications	254
10.3.1	SP Scanning Tunneling Microscopy on Metal Thin Films and Nanostructures	254
10.3.2	SP Scanning Tunneling Microscopy on Compound Thin Films and Nanostructures	259
10.3.3	Imaging the Spin Direction of Individual Atoms	269
10.3.4	Spin Friction	272
10.4	Summary	278
	<i>Index</i>	285

Preface

Nanomagnetism comprises magnetic phenomena in matter where at least one dimension is in the nanoscale, i.e., in the range from 1 to 100 nm. This field includes the study of the properties and applications of magnetism in nanoparticles, nanodots, nanowires, thin films, and multilayers, and also macroscopic samples that contain nanoscopic particles. Applications of nanomagnetism range from spintronics—i.e., manipulation, storage, and transfer of information by means of electron spins—to biosensors as well as medical applications.

Nanomagnetism has been able to stimulate applied as well as fundamental research, particularly in magneto-transport as well as magneto-optical properties of nano-size materials. In particular, spin tunneling properties are exploited in spintronic applications and are a unique tool for surface imaging as in spin-polarized scanning tunneling microscopy.

Thus, this book compiles the work of leading researchers specializing in spintronics, particularly spin transfer torque (STT) and its application to next-generation MRAM (STT-RAM); in highly ordered (e.g., $L1_0$) magnetic alloys in thin film form; and in perpendicular magneto-recording media and STT junctions, as well as relaxation mechanisms in magnetic materials for spintronic applications.

The book also includes chapters on nonlinear dynamic properties of 2D arrays of magnetic nano-dots, dynamics of magnetic nanoparticles and nanodevices, as well as nonlinear optics, and magnetoplasmonic studies in magnetic nanostructures with an eye to biosensing applications.

The last two chapters are more fundamental in nature and are related to understanding magnetic exchange in molecule-based

magnets, and spin-polarized scanning tunneling microscopy, a sophisticated technique that enables studying magnetic phenomena on surfaces with real-space imaging and spectroscopy techniques down to the atomic level.
